Trichomoniasis 101 & Breeding Soundness

Kansas has seen a rise in Trich cases here recently. Trichomoniasis, also known as Trich, when passed to cows/heifers, can lead to a number of breeding problems, not to mention a large economic loss to the U.S. Beef Industry. In light of the increase and with cattle breeding season just around the corner, an educational program on Trichomoniasis and breeding soundness in bulls is being offered.

K-State Research and Extension/Butler County in partnership with Butler Community College Ag Facility and Kansas Department of Ag are teaming up to provide this learning opportunity. The goal is to help producers learn the regulations and facts regarding Trich and know what they can do to help protect their herd. A segment on bull breeding soundness will also be provided.

Class will be held on:

February 22nd, 11:00 a.m. – 1:00 p.m.

At Butler Community College Ag Facility

RSVP to Butler County Extension Office (316) 321-9660

Lunch will be provided
