Flint Hills Prairie Wildflower and Pasture Tour

Each spring wildflowers bloom on the prairie! The Kansas Flint Hills in the tallgrass prairie are home to hundreds of species of native flowers and now is the perfect time to get outdoors and enjoy the show!

Last Spring, K-State Agriculture agents from around the state collaborated to create a virtual walk through the Flinthills, among the wildflowers. Their goal was to help viewers discover the natural beauty of the Flint Hills, while identifying each wildflower.

This year as flowers begin to bloom again, we encourage you to take a moment to watch the virtual Wildflower Tour and discover all the beauty of the Flint Hills. A walk through the prairie offers an amazing array of prairie wildflowers! The virtual tour can be

found on our website at <https://www.butler.k-state.edu/agriculture>. Agents that participated in the creation of this video are Jeff Davidson, Lyndsey Shorter, Brian Rees, Mike Holder, and Charlene Miller. For more information about Wildflower identification, contact the Butler County Extension Office at (316) 321-9660.
